

**01 October 2024**

**To Whom It May Concern,**

I am pleased to recommend Maja Panoska for any future opportunities she may pursue. I have worked with Maja as their professor at the Faculty of Computer Science and Engineering (FCSE – FINKI) and currently as her employer during her internship at Inteligenta.

While Maja attended several of my classes, I had the opportunity to work closely with her during the Advanced Databases course. Maja demonstrated a solid understanding of complex database concepts and excellent teamwork skills in this course. In their group project, they played a crucial role in designing and creating a robust database, including generating data and implementing SQL procedures. Their technical competence and collaborative approach significantly contributed to the project's success.

Currently, Maja is participating in a three-month internship at Inteligenta, where she is part of a team developing an attendance tracking system for students at their faculty. She has been working with technologies such as Spring Boot Java, Thymeleaf, Bootstrap, Docker, Git and GitLab, consistently showing an aptitude for quickly mastering new tools and applying them effectively in a real-world context. Maja has proven to be a proactive, reliable, and skilled individual, eager to learn and contribute.

I am confident that Maja will excel in any future endeavors, and I strongly recommend her for any positions that align with her skills and aspirations.

Sincerely,

Sincerely,

Prof. Goran Velinov, Ph.D.

Faculty of Computer Science & Engineering
